Education

B.Tech in Computer Science & Communication Engineering, Kalinga Institute of Industrial Technology 2023 – Present

• **SGPA (Sem VI):** 9.96/10.00 | **CGPA (Sem I-VI):** 9.30/10.00

Work Experience

SWE (AI/ML) Intern, Starvox Labs Private Ltd. April 2026 – June 2026

- Enabled autonomous AI voice agents to handle 15,000+ calls/month and interactive video meetings by contributing to scaling, screen sharing, presentations, and web navigation capabilities.
- Designed and developed a node-based workflow automation builder supporting 25+ configurable nodes for an AI-powered content generation and ad campaign orchestration platform.
- Implemented seamless integration of AI agents with third-party tools for content generation and ad campaign execution through Model Context Protocol (MCP) infrastructure.

Web Developer Intern, Secuodsoft Technologies Private Ltd. May 2025 – June 2025

- Developed a Django-based web application that extracts text from uploaded images by integrating Tesseract for OCR and Pillow for preprocessing.
- Gained experience with Flask, Django, and RESTful APIs while contributing to scalable web application development.

Projects

AI Trust Analyzer | RAG, FastAPI, Next.js, Supabase, Docker June 2026

- Analyzed 50+ claims per response and generated explainable trust scores by engineering a multi-agent AI evaluation platform using Gemini and LangGraph, orchestrating 5 specialized agents: Claim Extractor, Retriever, Verifier, Critic, and Judge.
- Processed 300+ evidence snippets per analysis by building a hybrid RAG pipeline combining web search, semantic vector retrieval, automated deduplication, ranking, and contradiction detection.
- Deployed platform with asynchronous workflow orchestration and agent-level execution tracing, enabling transparent analysis of complex LLM outputs from ingestion to final verdict generation.

BLE Attendance App | React Native, Flask March 2026

- Enabled automated, contactless attendance marking for 100+ concurrent users per session by engineering a Bluetooth Low Energy attendance application using RSSI-based proximity validation.
- Improved system security and reliability by architecting system with role-based access for student, teacher, and admin.
- Evaluated BLE reliability and system robustness by conducting real-world testing across classrooms and hostel environments, generating and analyzing large-scale attendance logs (10,000+).

Social Media Platform | WebSockets, PostgreSQL, Redis, Django December 2025

- Designed a social media platform supporting user authentication, media posts, likes, comments, and real-time messaging using Django Channels with Redis as a channel layer, enabling low-latency communication.
- Implemented membership-based authorization for group chats, enforcing access control at both application and messaging layers.
- Simulated concurrent user activity to assess performance under load and identify bottlenecks in feed generation and message delivery.

Image Caption Generator WebApp | TensorFlow, Django July 2025

- Developed an end-to-end image captioning pipeline using VGG16 encoder + LSTM decoder trained on 40,000+ captions, achieving BLEU-1: 0.52, BLEU-2: 0.31.
- Built a Django web application with a responsive UI and asynchronous form handling.

Technical Skills

Languages: C++, Python, Java, SQL, HTML, CSS, JavaScript

Technologies: Django, Flask, FastAPI, Next.js, React Native, Git, Docker

Certifications

- IBM Machine Learning Professional Certificate
- AWS Academy Cloud Foundations Certificate
